DETAILED ACTION

Specification

The title of the invention is not descriptive. A new title is required that is clearly indicative of the invention to which the claims are directed.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

Claims 1, 2, and 5 are rejected under 35 U.S.C. 102(e) as being anticipated by Shimada et al. (US 2004/0137265 A1).

Regarding claims 1 and 5, Shimada discloses (see figure 8) a white light emitting diode including a blue LED (81) and a yellow and red phosphor sealed in the package resin (83). (Page 6 paragraph 63). The yellow phosphor emits light at between 520 and 580nm while the red phosphor has a peak at 611nm. (See figure 1, 7, and Page 6 Paragraph 61). Both phosphors are excited by the blue LED.

Regarding claim 2, Shimada discloses the Blue LED emits light at 465nm. (Page 6 Paragraph 61).

Art Unit: 2879

Claims 1, 2, and 4 are rejected under 35 U.S.C. 102(e) as being anticipated by Chua et al. (US 2004/0072106 A1).

Regarding claim 1, Chua discloses a white light emitting device including a blue LED, a yellow phosphor, and a red phosphor. (Pages 2 and 3, Paragraphs 22, 28, and 32). The yellow phosphor emits light at between 520 and 580nm while the red phosphor emits light at between 580 and 640nm. (Page 2 paragraph 28). Both phosphors are excited by the blue LED. (Page 3 paragraph 32).

Regarding claim 2, Chua discloses the Blue LED being InGaN which emits light at 465nm. (Page 2 Paragraph 22).

Regarding claim 4, Chua discloses the red phosphor being CaS:Eu²⁺ which emits light in the red spectrum (Page 2 Paragraph 28).

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

Claims 1, 2, 3, and 5 are rejected under 35 U.S.C. 103(a) as being unpatentable over Kummer et al. (US 6,669,866) in view of Shimada et al. (US 2004/0137265 A1).

Regarding claims 1, 2, 3, and 5 Kummer discloses a white light emitting device including a blue LED emitting at 450nm and a yellow phosphor emitting at between 520 and 580nm formed in a resin mixture and encapsulating the diode. (Column 5 lines 45-60). The yellow

Art Unit: 2879

phosphor is $(Y_{0.29}Tb_{0.67}Ce_{0.04})_3Al_5O_{12}$. Kummer does not appear to disclose the additional use of a red phosphor in the white emitting device, however Shimada teaches the use of applying a red phosphor to the blue LED and yellow phosphor in order to advantageously improve the color rendering property of the emitting light. (Page 1 paragraphs 7-9 and page 6 paragraph 63). Thus, it would have been obvious at the time the invention was made to a person having ordinary skills in the art to incorporate the use of a red phosphor as disclosed by Shimada into the white light emitting device as disclosed by Kummer in order to advantageously improve the color rendering property of the emitting light.

Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Hohn et al. (US 6,613,247) discloses the use of red and yellow phosphors in an encapsulant.

Contact Information

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Matt P Hodges whose telephone number is (571) 272-2454. The examiner can normally be reached on 7:30 AM to 4:00 PM M-F.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Nimesh Patel can be reached on (571) 272-2457. The fax phone number for the organization where this application or proceeding is assigned is (703) 872-9306.
